To the Chairman and Members,  
Bromyard Urban District Council.

Mr. Chairman, Mrs. Powell, Gentlemen,

I have pleasure in presenting my Annual  
Report for the year 1962.

I wish to thank Mr. Maxwell for completing  
much of this report, and for his help in the past year.

G.D.K. NEEDHAM

Medical Officer of Health

North Herefordshire Public Health Office,  
Westfield Walk,  
LEOMINSTER,  
Herefordshire.

PUBLIC HEALTH INSPECTOR'S SECTION OF REPORT

In the preparation of the Annual Report of the Sanitary Circumstances of the area, it is felt that not only these matters should be dealt with, but also the future of the area as a unit of Local Government. Despite the efforts of officials and members of the Council to improve the district by the introduction of industry, the response has been far from satisfactory, even though two small factories employing female labour have been installed during the past two years.

The population of the district has remained practically the same over the last ten years and compared with other areas where the birth rate exceeds the death rate, this has balanced itself each year. Speaking in a humorous term "The area is like Peter Pan, it won't grow up". What can be the solution to this problem, now that the comprehensive water scheme of the County Water Board is under construction and approval given and the contract fixed for the new and much needed sewage disposal works ?

Does the district's future lie in the development of the area as a dormitory town serving the larger towns of Worcester, Hereford and Kidderminster, or as an area under the Town Development Act, being a participant in an "overspill" scheme with a town like Birmingham whence population and industry may be directed into the area ? Or has the area to become part of a larger district and so lose its identity as an administrative district ? Under the review of County Districts this may become a fact, due to the recommendations of the Ministry of Housing and Local Government on the grouping of small authorities. Economically this would be better for administration and, from the co-ordination of services, improvements which cannot be entertained at present may become accomplished facts and be for the benefit of the area and the population.

With the ever increasing legislation that continues to be made law, these changes in administration would allow both officials and councillors to keep up to date with the modern trends of local government. Whilst the abolition of the small areas may regretfully reduce the personal contact of officials with the population of the district, the economic

structure of the area would be strengthened for the benefit of the majority.

### WATER SUPPLY

Number of houses connected to the main supplies of the Herefordshire Water Board .. .. 606

Despite many difficulties in maintaining the supply during the year the Water Board ensured that there was always an adequate and wholesome supply in the area, and when complaints were conveyed to the Board's Engineer these received immediate attention. It is pleasant to note that between the Board's officials and this authority there exists an excellent liason to our mutual benefit.

The samples taken during the year for bacteriological examination were all found to be satisfactory.

### SWIMMING BATH

There is no public swimming bath in the district.

### SEWERAGE AND SEWAGE DISPOSAL

According to records, this area has been talking about a sewage disposal scheme since 1872 when the then existing Sanitary Board approved of a scheme that would be in the region of £1,350, and an engineer was instructed to prepare the scheme. What happened to this proposal like those in 1900, 1905, 1913, 1925 and even in 1936, can be guessed, as the councils of those days were more concerned in keeping down expense than marching with the times. Since the advent of the Rivers Pollution Act, this council like many others is now bearing the burden of past neglect, and at the end of the year Ministry approval was received for the long awaited sewage disposal scheme for the area at a cost of over £60,000. This means that the charge on the rates, despite any assistance that may be derived from other sources, will if anything retard the development of the town. As mentioned in my report of last year, could not this essential service not only for this town but every other town and village in the country be a national one in the interests of public health ?

### HOUSING

Nothing much can be added to previous reports on the general housing conditions of the area, except that owners are now realising the benefits of the Standard Grants towards modernising their houses, and there has been an increased demand during the year for grants. No council houses were erected during the year, but in private development a scheme has been submitted for the erection of 45 dwellings for sale in Highwell Meadow: this scheme will entail laying a new sewer in the Highwell area and the existing properties that at present use septic tanks can be connected to the sewer and to the new sewage disposal works.

## HOUSING (Continued)

### Standard Grants

Nine applications under this scheme were approved during the year.

### Council Houses

The Council's scheme that resulted in the bungalows being erected in the Schallenge some years ago has during the year been the subject of visits from representatives of five local authorities, all of whom expressed approval of the layout and the construction of the houses and their amenities.

As mentioned on previous occasions, the maintenance costs of council houses is steadily increasing, and it is evident that within a few years many of these dwellings instead of being an asset will be a liability to not only this authority but to many others in the country.

### Rent Act, 1957

No action was taken during the year.

## PUBLIC CLEANSING

Regular weekly collections are made from every occupied house and business in the district, which with almost 600 houses in the district, means (excluding business premises) 31,200 collections of refuse are made yearly. For years many of the householders have been using any old type of container for refuse, despite the fact that in the Public Health Act, 1936, Section 75, they are required to provide a proper type of dustbin. It may be in the near future that the power given under this section will be strictly enforced in the area.

The street cleansing of the main streets is carried out daily, and in other parts of the town on a routine system. Much of the work of street cleansing could be drastically reduced if persons would carry out the requirements of the Litter Act, and report offenders who throw refuse all over the streets instead of into their dustbins. In these days of increasing legislation the council's officials cannot themselves keep proper observations on the general public for this offence.

### Public Conveniences

During the year the custom of supplying toilet rolls in the lavatories has been abandoned, as it appears that some users for the payment of one penny thought they were entitled to whole toilet roll: the attendants now place loose sheets of toilet paper in the compartments three times daily.

RODENT CONTROL

During the past two years the rat population seemed to be decreasing, but recently with the hard weather at the end of the year there was an increase of rats in the area. The attraction of animals housed in the centre of the town, the slaughterhouses, and the indiscriminate dumping of food waste by residents helped to increase the number of rats. When complaints were received they were dealt with promptly, and baiting and poisoning carried out in the sewers and around suspected breeding places brought about a large number of "kills".

FOOD INSPECTION AND SUPERVISIONMilk Registration and Licensing

Three dealers are registered in the urban district. No complaints were received or action taking during the year.

Food Premises

There has been a distinct trend in the food shops of the town to improve their conditions, and the majority of the businesses dealing in foodstuffs are now modernising their premises, taking into consideration advice given for dealing with the food in a hygienic way.

The proprietors of the businesses realise that clean and attractive premises improve their trade, and it is noticeable that the assistants in these premises always wear clean and tidy overalls. To these progressive traders I must add my congratulations on their efforts which can compare very favourably with food premises in larger towns.

Meat Inspection

As previously reported, there are two slaughterhouses in the district. Whilst both have had alterations carried out to comply with the standards of the Ministry of Agriculture, and in their way are satisfactory, in these days of progress and hygiene the sites of both premises cannot be termed "ideal". Until a definite policy of centralised slaughtering is introduced by the Ministry, I cannot see much hope of these two slaughterhouses being transferred from their present sites. If the retail trader in other foods dealt with their merchandise in such manner as the butchering fraternity of this country slaughter and dress the animal carcasses, and the fanatics of "hygiene" realised the conditions, we might see Ministerial steps for the slaughtering of animals in premises similar to hospitals, where all overalls and utensils of the trade were properly sterilised for each slaughter of an animal. Perhaps this dream will not be realised until centralised slaughtering has become a fact.

Meat Inspection (Continued)

The supervision of slaughtering in the private slaughterhouses is a problem, and with the increase of legislation falling to an officer holding a joint appointment with multifarious duties is indeed a strain, but as far as reasonably practical inspections are carried out on the regular slaughtering days.

Six persons are licensed to slaughter animals under the Slaughter of Animals Act, 1933-54, and no licences extend to the slaughter of horses.
